The Mobitrac Aquatic Vegetation T-Cutter

The two in one, deep and shallow water cutter

The Mobitrac Aquatic Vegetation T-Cutter is a two in one deep water and shallow water cutter designed for cutting:

- All types of submerged Aquatic vegetation;
- All types of emergent aquatic vegetation and
- A large range of common terrestrial vegetation that border lake edges and that are commonly found in wetlands.

The Mobitrac Aquatic Vegetation T-Cutter easily connects to the Mobitrac 8000AU in minutes and is ready for cutting.

Specifications

Dimensions

Cutting Width 2.1m Wide

Cutting Depth Above ground level, to standard 1.5m below water. (Greater depth can be achieved with correct craft orientation)

Weight 68Kgs

The Mobitrac Aquatic Vegetation T-Cutter is equipped with double acting busati cutting blades that do not require water for lubrication which make it ideal of cutting on land and underwater.

The Mobitrac Aquatic Vegetation T-Cutter can be used on land, in shallow water, in marshlands, in wetlands and in deep water.

Cutting is able to be done above ground level and below water level down to a 1.5m depth, with a 2.1m wide cut. The depth of cut below water can be increase in excess of 1.5m with correct craft orientation. This cutter has the versatility to cut both delicate submerged aquatic plants with precision as well as tough emergent aquatic vegetation such as thick cumbungi.
